

TEAMING REQUEST

MAXVISION

GDPV4

MaxVision a specialty computer packaging company designing and building mission-specific workstations and servers for the US Military. We have been supplying a full range of servers to the USMC MARFOR CyberCom for three years and high-performance geospatial workstations/servers to the US ARMY TOCs for the past seven years. This summer, MaxVision will introduce a CyberPac9200XL.

- 3U x 15” weighing on 30 pounds fitting into a Pelican Air 1637 case**
- 128C/256T Processors and 2TB of ECC memory**
- Over 490TB of removable data storage**
- 6 PCIe 4.0 full slots**
- Dual Redundant 1000-watt power**

Our high-density serviceable compact servers and workstations are unmatched in creative packaging.

MaxVision looking for in a partner to address the DCO GDPv4 garrison level requirement?

Although MaxVision is not without some software integration talent, it is not our principal business. We are a commercial specialty computer H/W company focusing on military missions. We are looking for partners who have a long-standing working relationship

in the DCO efforts that can perform the complete software integration and select acceptable Switch, Gateway, and TAP technology to yield the smallest cost-effective package for the end customer. MaxVision can provide the custom mechanical talent to do the final packaging and transit case design to offer a transportable smallest, and lightest weight solution.
