

TEAMING REQUEST
PACKET FORENSICS
GDPV4

Packet Forensics is looking to partner with and support solution providers in search of an innovative, high data rate, packet collection and processing for advanced active DCO capabilities beyond what typical packet collection and deep-packet inspection firewalls can provide alone; complete with in-line activities. Packet Forensics is a leader in high-speed packet processing with nearly 2 decades of experience providing CALEA (Communications Assistance for Law Enforcement Act) managed services for large telecom and internet service providers. Our equipment is operationally deployed in over a dozen countries supporting both lawful intercept and cyber operations missions. Building on that expertise and experience, Packet Forensics provides cyber operations, cyber security, cyber data services and wireless tracking capabilities for government and commercial customers as well.
